BRAIDBAR

STORE SET-UP GUIDE · CARD PAYMENTS

Start taking card payments on braidbar.store

A short, step-by-step guide to activating Shopify Payments so customers can pay by card, Apple Pay and Google Pay at checkout. It takes about 10 minutes, and only the store owner can complete it.

1 **Business type & tax number**

Your business type (e.g. sole trader / empresário em nome individual or company) and your NIF.

2 **ID document**

Your Cartão de Cidadão or passport, plus your date of birth and home address.

3 **Bank account (IBAN)**

The IBAN of the account where your sales should be paid out.

4 **Your phone**

For any verification code Shopify sends while you set up.

> Keep these details private. Enter them only inside your Shopify admin; never send your ID, NIF or IBAN by email, WhatsApp or to anyone helping with the website.

The pictures are simplified illustrations. Your Shopify screens may look slightly different, but the steps are the same.

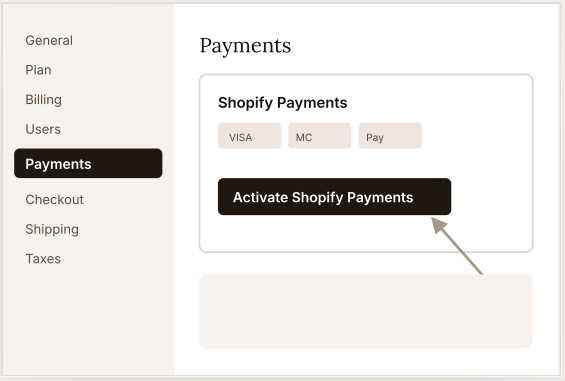

01

Open your store settings

Sign in to your Shopify admin (on a computer is easiest). At the bottom of the menu on the left, click **Settings**.

Shopify admin → Settings

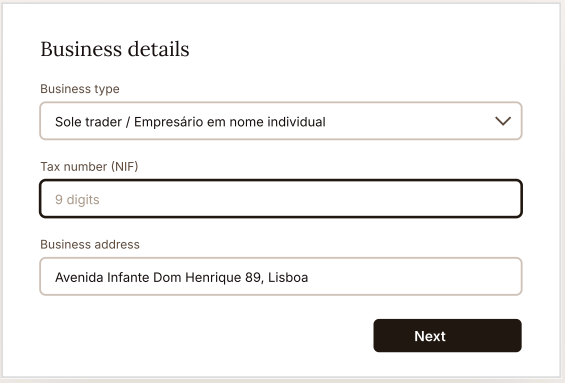

02

Go to Payments and activate

In the Settings list, click **Payments**. In the Shopify Payments box, click **Activate Shopify Payments** (it may say "Complete account setup"). A short form opens.

Settings → Payments → Activate Shopify Payments

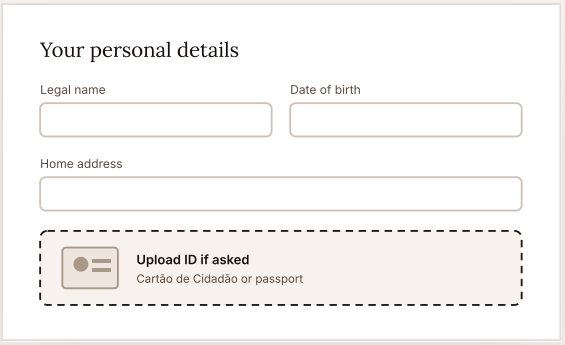

03

Business type and tax number (NIF)

Choose your business type, then enter your **NIF** and business address. Use exactly the details registered with Finanças, so verification goes through first time.

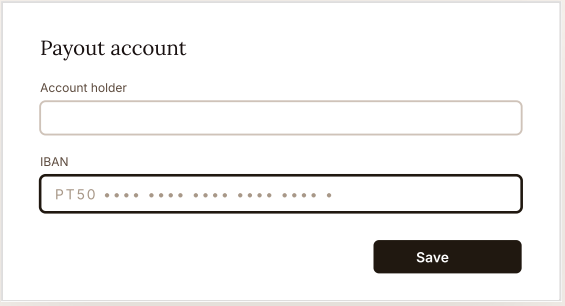

- ✓ Sole trader: your personal NIF
- ✓ Company (Lda / Unipessoal): the company's NIPC

04

Your ID details

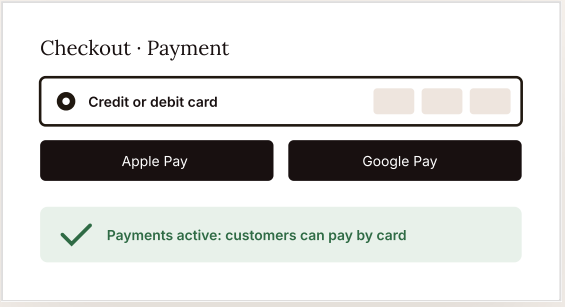

Enter your legal name, date of birth and home address exactly as they appear on your ID. If Shopify asks for a photo of your **Cartão de Cidadão** or passport, upload a clear picture of the full card.

05

The IBAN for payouts

Enter the **IBAN** (it starts with PT50 for Portuguese banks) of the account where your sales should be paid. The account holder name should match your business or personal name. Then click **Save**.

06

Done: cards appear at checkout

Once Shopify has verified your details, card payments, Apple Pay and Google Pay are added to checkout automatically. Nothing needs to change on the website.

If Shopify asks for more

Verification can take a little time. If Shopify emails you or shows a banner asking for extra details, return to Settings → Payments and complete what it asks.

Optional: MB WAY

Many Portuguese customers like paying with MB WAY. That needs a separate payment app from the Shopify App Store, which can be added later.

Safety tip: Shopify will never ask for your bank login or card PIN. Only enter your details inside admin.shopify.com.
